Non-reversible temperature labels are specialized indicators used to monitor and record temperature exposure in various applications, particularly in industries where maintaining specific temperature ranges is critical. These labels typically consist of a chemical formulation enclosed in a label or sticker format. When exposed to a certain temperature threshold, the chemical composition irreversibly changes color, indicating that the labeled item has been subjected to that temperature level. This irreversible change serves as a permanent record of temperature excursion, making it easy to identify if temperature-sensitive products, such as pharmaceuticals, food items, or electronic components, have been exposed to unfavorable conditions during storage, transportation, or processing.

The global Non Reversible Temperature Labels market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
