The global Non-Steerable Antenna market size is predicted to grow from US$ 3857 million in 2025 to US$ 6455 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

A non-steerable antenna, also known as a fixed antenna, is an antenna that is designed to operate in a specific direction and cannot be electronically or mechanically steered to change its direction. Unlike steerable antennas, non-steerable antennas are fixed in a specific position and cannot be adjusted to change the direction of their radiation pattern. They are typically simpler and less expensive than steerable antennas, and they are often used in applications where a fixed directional coverage area is sufficient, such as in broadcast, point-to-point communication, and satellite communication systems. Non-steerable antennas may be designed with various types of radiation patterns, including directional, omnidirectional, and sectorized patterns.
