Non-stick baking paper has a thin silicone coating to prevent your baking sticking to oven trays and cake tins without having to grease with butter or oil. Generally it is heat-resistant up to 220°C (200°C fan-forced). You can still use it at temperatures above this but it will tend to brown around the edges. It is also great to use two sheets either side of your pastry when rolling out – it does away for the need to use flour to stop it from sticking to the bench top or rolling pin. It can also be used to make paper icing bags and for wrapping food to cook ‘en papillote’. Some recipes refer to it as parchment paper.
