Many adhesives contain solvents, chemicals, and other toxic ingredients that can cause adverse health issues for the people who encounter them. Some of the toxic fumes, or volatile organic compounds (VOCs), in petroleum-based glues include formaldehyde, methylene chloride, xylene, toluene, light aliphatic naphtha, and N-hexane. Breathing in toxic fumes from glues can induce an array of health issues, including headache, nausea, difficulty breathing, seizures, and may even lead to certain types of cancer. Non-toxic glues have low VOCs, or in some cases, no detectable VOCs. Therefore, they are generally much safer to use.
