China market for Non-water Miscible Coolant Lubricants is estimated to increase from US\$ million in 2022 to US\$ million by 2029, at a CAGR of % from 2023 through 2029.

Europe market for Non-water Miscible Coolant Lubricants is estimated to increase from US\$ million in 2022 to US\$ million by 2029, at a CAGR of % from 2023 through 2029.

Global key Non-water Miscible Coolant Lubricants players cover Ingersoll Rand, Allweiler, Bechem, Chemische Werke Kluthe GmbH, Zeller+Gmelin GmbH, Addinol, Esgemo, BP Europe SE and Curtis, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2022.

Non-water-miscible coolant lubricants have some advantages compared to water-miscible types. Thanks to their generally higher kinematic viscosity, they have a good lubricating effect. Besides this, they are characterized by a high pressure susceptibility and good corrosion properties. Another advantage is that with non-water-miscible coolant lubricants no biocides are required for fighting bacteria and fungal attack, as

they are virtually germ-free and resistant to bacteria. Their service life is thus considerably longer than that of water-miscible coolant lubricants.

One drawback of non-water-miscible coolant lubricants is that their cooling effect is very slight due to the low specific heat capacity and thermal conductivity compared to water-miscible coolant lubricants. Another problem is posed by oil mist which may be generated when using oils, primarily at high cutting speeds. The aerosols contained within this can lead to health risks in the lungs. Furthermore, oil mist is easily inflammable under certain circumstances, thus rendering adequate safety measures necessary.
