The global Non-Wearable Sleep Tracker market size is predicted to grow from US\$ 382 million in 2025 to US\$ 780 million in 2031; it is expected to grow at a CAGR of 12.7% from 2025 to 2031.

Non-Wearable Sleep Tracker refers to a device that records sleep activities by monitoring bed vibration or human movement. While sleep trackers can collect a lot of information about your slumber habits, they don't measure sleep directly. Instead, they often measure inactivity as a surrogate for estimating sleep. Most sleep tracking devices make some guesstimate as to how much you're actually sleeping.

The current market for non-wearable sleep trackers is composed of global well-known manufacturers such as Apple (28.01%), ResMed (22.16%), Withings (6.86%), Simmons Bedding Company (5.84%), Sleepace (2.60%), Empit (0.55%) and other brands (33.98%). At present, most of the market share is in the hands of big brands, and will still occupy a dominant position in the future. In terms of types, all markets for non-wearable sleep trackers can be divided into piezoelectric motion sensors and capacitive motion sensors. Moreover, products based on capacitive motion sensors occupy a relatively large share in the global market. From a regional perspective, North America and the Asia-Pacific region will occupy a larger market share in 2019 and will maintain steady growth in the next few years. The European market will still play an important role and cannot be ignored.
