The global Non-woven Unidirectional Carbon Fiber Cloth market size is predicted to grow from US\$ 493 million in 2025 to US\$ 707 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Non-woven unidirectional carbon fiber is a kind of non-woven carbon fiber reinforced material. Consists of unidirectional layers stitched together. Because each layer can be placed in different directions or axes, it provides strength and stiffness in multiple directions. This allows for a fiber concentration density that provides maximum longitudinal tensile potential and is greater than any other fabric. It is three times the longitudinal tensile strength of structural steel and one fifth the weight density.
