A noninvasive positive pressure ventilation (NPPV) mask is a medical device used to deliver air or oxygen under pressure to patients experiencing respiratory distress, without the need for invasive procedures such as intubation. NPPV masks come in various styles, including full-face masks, nasal masks, and nasal pillows, and are designed to fit securely over the patient's face or nose. They work by creating a positive pressure environment that helps keep the airways open, facilitating better gas exchange and improving breathing. NPPV is commonly used in conditions like chronic obstructive pulmonary disease (COPD), acute respiratory failure, and sleep apnea, providing effective respiratory support while minimizing discomfort and risks associated with invasive ventilation.
