Abstracts

The global Nonvolatile Static Random Access Memory market size is predicted to grow from US\$ 406 million in 2025 to US\$ 502 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

SRAM (static RAM) is random access memory (RAM) that retains data bits in its memory as long as power is being supplied. Unlike dynamic RAM (DRAM), which stores bits in cells consisting of a capacitor and a transistor, SRAM does not have to be periodically refreshed. Static RAM provides faster access to data and is more expensive than DRAM. SRAM is used for a computer's cache memory and as part of the random access memory digital-to-analog converter on a video card.

The major players in global Static Random Access Memory market include Cypress, Renesas, etc. The top 2 players occupy about 60% shares of the global market. North America and Japan are main markets, they occupy about 92% of the global market.
