Abstracts

The global Nonwoven Production Line market size is predicted to grow from US\$ 259 million in 2025 to US\$ 384 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2025, global Nonwoven Production Line production reached approximately 360 units. The average price is 735 K US\$ /Unit. The working principle of the Nonwoven Production Line is mainly based on physical and chemical methods. After the raw materials are stirred and mixed, they are formed into a fiber web through mechanical or air-laid technology. Then, after reinforcement processes such as hot rolling, needle punching or hydroentanglement, a stable bonding force is formed between the fibers to form a nonwoven fabric. Finally, after drying and fine processing, the final nonwoven product is obtained.

Cost Structure and Gross Profit Margin: Precision mechanical components and control systems account for a significant portion of the cost structure (spinning boxes, drawers, hot rolling mills, winding machines, and PLC/DCS systems), followed by steel and manufacturing costs. Due to high technological barriers and a high degree of customization, the gross profit margin of mid-to-high-end equipment suppliers generally remains between 25% and 40%, while that of low-end, homogeneous equipment drops to 10%-15%.

Market and Supply Chain: The high-end market is dominated by German, Italian, and Japanese companies. The upstream of the supply chain includes special steel (Baowu, ThyssenKrupp), precision bearings (SKF, FAG), servo motors (Siemens, Yaskawa), and sensors (Pepperl+Fuchs, Keyence); downstream customers cover medical supplies (Procter & Gamble, Kimberly-Clark, Heng'an), medical equipment (Winner Medical,

3M), filtration (Donaldson, Camfil), automotive (Toyota Boshoku, Faurecia), and geotechnical materials. Global regional development levels: Europe has an absolute technological lead in high-end carding and spunlace equipment; China has achieved localization of mid-range equipment and occupies a major share in the global low-to-mid-range market; Japan has a unique advantage in the field of spunbond meltblown equipment.
