Nonwoven weed control fabric is a breathable, felt-like synthetic material, typically made from polypropylene or polyester, that blocks sunlight to suppress weed growth while allowing water, air, and nutrients to pass through to the soil and plants below. Unlike woven fabrics, its fibers are bonded together through heat, chemicals, or mechanical processes rather than being interlaced. This structure makes the fabric durable, easy to cut and install, and effective in preventing weeds in gardens, landscapes, and agricultural settings.
