NOR Flash is a non-volatile memory commonly used in embedded systems and storage devices. Compared with NAND Flash, NOR Flash has lower storage density and higher cost, but provides faster read speed, lower read latency, and better random access performance. NOR Flash can provide higher reliability and lower latency startup configuration support during the initial response and startup of 5G devices. Due to the particularity of the operating environment of 5G base stations (operating temperature -40 °C~105 °C, ensuring a lifespan of at least 10 years), NOR Flash used in 5G base station equipment usually needs to meet at least industrial standards, and the requirements for NOR Flash need to meet 'high capacity+high performance+high reliability'.

The global NOR Flash for 5G Base Stations market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
