## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Nord-lock washers are two-piece washers with an anti-looseness feature, invented by Nord-lock in 1982. Nord-lock washers come in pairs, with the cam surfaces (see above) facing each other so that the ribs grip the bolt/nut and the mating material. The Nord-lock washers are used to grip the threaded nut and mating material.

Nord-lock washers are effective against screw loosening, but only against rotational loosening. Besides rotational looseness, non-rotational looseness is another type of screw looseness. Non-rotational looseness is caused by plastic deformation of the member sandwiched by the screw.

The global Nord-Lock Washer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
