Normal Phase Columns are columns in chromatographic separation technology whose stationary phase is non-polar or weakly polar materials, such as silica gel, polystyrene, etc. The mobile phase is a polar solvent or mixture. In Normal Phase Columns, due to the non-polar nature of the stationary phase, the adsorption forces experienced by different components in the column depend on their polar properties. Normal Phase Columns are mainly used to separate non-polar or weakly polar substances, such as hydrocarbons, drugs, etc.

With the development of materials science, more new normal-phase stationary phase materials with excellent properties may appear in the future to improve separation efficiency and accuracy.
