The global Normally Closed Magnetic Reed Relay market size is predicted to grow from US\$ 265 million in 2025 to US\$ 416 million in 2031; it is expected to grow at a CAGR of 7.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The normally closed magnetic reed relay is an electromagnetic control device based on the reed switch technology. It consists of a pair of magnetic reeds sealed in a glass tube. When there is no external magnetic field, the reeds maintain contact (normally closed state) due to their own elasticity. When the external magnetic field is applied, the reeds are magnetized and attract each other, and the contacts are disconnected; after the magnetic field disappears, the reeds resume contact. It is suitable for circuits that require default access and automatic recovery after power failure (such as safety systems, fault detection, signal switching).
