The global Normally Closed Solenoid Valve market size is predicted to grow from US\$ 2651 million in 2025 to US\$ 3410 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

A normally closed solenoid valve is closed in its de-energized state. As with normally open valves, there are a variety of designs. A simple design has the armature low in the coil. When the valve is energized, the armature moves up towards the current's center, pulling a plunger or piston. This opens the valve. When the current stops, a spring pushes the armature back down to close the valve.
