The global Normally Closed Solenoid Valves market size is predicted to grow from US\$ 6595 million in 2025 to US\$ 9234 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Normally closed solenoid valves are electromechanically actuated valves that remain closed in their de-energized state and open or switch flow paths when the coil is energized. They typically consist of a solenoid coil, valve body, valve core, and return spring, and are characterized by fast response, high control accuracy, compact structure, and ease of integration into automated systems. As the most widely used fundamental solenoid valve type in fluid control, their 'fail-closed' configuration provides inherent safety benefits by preventing unintended leakage or flow when power is lost. They are widely applied in pneumatic systems, water treatment equipment, industrial automation, gas control, medical devices, and household appliance fluid systems. In 2025, the global normally closed solenoid valve market is estimated at approximately USD6742 million, with annual shipments of around 312 million units, resulting in an average selling price of about USD21.6 per unit. The market is expected to grow at a CAGR of approximately 5.4% over the next five years. Typical single-line production capacity ranges from 600,000 to 4,200,000 units per year, while industry gross margins generally fall between 26% and 43%.
