The global Normalpentane market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Pentane is colourless with a very low odour and high volatility thanks to its low, narrow boiling range ? it is among the lowest boiling hydrocarbon liquids and so evaporates at a very high rate. It is used principally as a blowing agent in foam production, as a propellant in aerosols and as reaction media for polymerisation processes. In actual production, pentane blend is the most common type. Isopentane and Normalpentane Blend contain Isopentane and Normalpentane as the main ingredients. The single principal content is not less than 10%, not more than 90%. Pentane blend is a very fast evaporating hydrocarbon solvent and low in impurities such as sulphur, olefins, benzene and total aromatics. Examples of end uses for this solvent are blowing agent, electronic cleaning and polymerisation. In the report, we main cover pentane blend.

Global N-Pentane key players include Shell, Phillips 66 , CNPC, ExxonMobil Chemical, etc. Global top four manufacturers hold a share about 45%.

Asia Pacific is the largest market, with a share about 50%, followed by Europe and North America, have a share over 40 percent.

In terms of product, Pentane 60/40 is the largest segment, with a share about 30%. And in terms of application, the largest application is EPS Blowing Agent, followed by Electronic Cleaning, Chemical Solvent, Aerosol Propellant, ect.
