The global Norovirus ELISA Kits market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Norovirus ELISA kits are enzyme-linked immunosorbent assay kits used for the detection and quantification of norovirus antigens or antibodies in biological samples. These kits are used to identify the presence of norovirus, which is a highly contagious virus that causes gastroenteritis. The ELISA method employed by these kits can detect either the viral antigens directly or the antibodies produced by the immune system in response to norovirus infection.

The industry trend for norovirus ELISA kits reflects the ongoing need for accurate and reliable methods to diagnose norovirus infections, which are a significant cause of gastroitis worldwide. With the increasing focus on public health and food safety, there is a growing demand for rapid and sensitive diagnostic tools like ELISA kits. Additionally, as norovirus strains continue to evolve, there is a push for ELISA kits that can detect multiple norovirus serotypes. The market for norovirus ELISA kits is expected to expand as diagnostic capabilities improve and the importance of norovirus control measures in healthcare and foodservice industries increases.
