The global Norovirus Vaccine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Norovirus, a human caliciviridae virus, is mainly transmitted through the fecal-oral route and is highly contagious. It has no obvious pathogenicity in healthy people, but can cause serious illness and complications in immunocompromised patients, the elderly and children. It can last for a long time, and the main symptoms of infection are diarrhea and vomiting. Norovirus vaccines can effectively prevent viral infections, but the current existing vaccines fail to meet clinical needs, resulting in a large demand gap. As people's health awareness increases, there will be a huge demand for norovirus vaccines in the future.
