??Nozzle liners?? are replaceable protective sleeves or inserts installed inside the bore of industrial nozzles to shield them from wear, corrosion, and thermal degradation. Typically made from abrasion-resistant materials, they extend nozzle lifespan in harsh applications involving molten metals, abrasive slurries, high-pressure fluids, or corrosive chemicals. Their key functions include maintaining precise flow control, preventing material buildup, and reducing maintenance downtime in industries such as steelmaking, chemical processing, waterjet cutting, and spray coating. Designs vary from simple cylindrical sleeves to complex multi-layer structures with thermal insulation or erosion-resistant coatings.

United States market for Nozzle Liners is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
