Nozzle separator is a device used to separate gas and liquid mixtures, also known as a nozzle separator.

It usually consists of a cylindrical container and a nozzle located at the bottom of the container. The mixture enters the container through a nozzle, where a vortex is formed. Due to the centrifugal force, the liquid and the gas are separated, the liquid is deposited at the bottom of the container, and the gas is discharged through the outlet at the top.

Nozzle separators are used in chemical, oil, natural gas and other fields to separate

liquids and gases for subsequent processing.
