The global NTA Sensor Chip market size is predicted to grow from US\$ 48.91 million in 2025 to US\$ 91.92 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

NTA Sensor Chips are consumables with NTA, Ni-NTA, Tris-NTA, or Poly-NTA functionalized surfaces used on label-free interaction analysis platforms such as SPR, SPRi, OpenSPR, and BLI. They enable reversible capture of His-tagged proteins via nickel ion coordination, and are applied in protein-protein interactions, small molecule screening, antibody discovery, and quantitative analysis of process samples. The estimated gross margin is about 59%.

Demand for NTA sensor chips is driven by the high prevalence of recombinant proteins and His-tag systems. Compared with amine coupling, NTA capture does not require permanent immobilization of the target protein; the ligand can be exchanged using EDTA, imidazole, or metal ion regeneration, making it suitable for early drug discovery, antibody screening, conformation-sensitive targets, and workflows requiring rapid ligand changes. Main demand is concentrated on consumables compatible with platforms like Biacore, Cytiva, Reichert, OpenSPR, and Octet, showing clear platform binding characteristics.

Although the market size is small, unit price and repeat purchase frequency are high, resulting in gross margins above those of general lab consumables. Growth is mainly driven by antibody therapeutics, protein degradation, molecular glues, fragment screening, and rapid supernatant assays. Multi-valent NTA, Poly-NTA, and high-capacity hydrogel surfaces improve the stability of His-tag ligands, making these chips more suitable for low-molecular-weight analysis and high-throughput characterization.

The competitive landscape consists of both proprietary platform consumables and third-

party compatible chips. Future opportunities for price increases lie in high-throughput arrays, long-life regenerable surfaces, and low non-specific adsorption coatings, while standard single NTA surfaces primarily serve general capture and teaching applications.
