The global Nuclear Fuel and Waste Management market size is predicted to grow from US\$ 22510 million in 2025 to US\$ 26730 million in 2031; it is expected to grow at a CAGR of 2.9% from 2025 to 2031.

Nuclear fuel & Waste management involves minimising all forms of radioactive waste, categorising it and determining appropriate disposal methods in line with Best Available Techniques (BAT).

The world's energy resources are growing rapidly, and the resources available are insufficient to meet the growing demand. The consumption of fossil fuels leads to greenhouse gas emissions and alternative energy sources are an effective answer to this concern. Nuclear energy is a highly mature power generation technology. But the radioactive content of nuclear fuel is very harmful. Radioactive waste generated by nuclear power plants, hospitals, and industries and its disposal require highly sophisticated technologies, and the increase in nuclear waste is a serious problem. An advanced nuclear waste management system is essential for proper disposal of nuclear waste.
