The global Nuclear Fuel Storage market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Dry storage barrels are a way to store highly radioactive nuclear waste, such as spent fuel that has been cooled for at least a year. So-called 'storage drums' are generally steel containers, either welded or fastened with bolts. The spent fuel rods inside the barrel are in a chemically inert gas. No leakage is a basic requirement for storage tanks. There are also steel parts, concrete or other materials on the outside of the storage tanks to shield the radiation from the nuclear waste. Therefore, this design can be used for both storage and transportation.

United States market for Nuclear Fuel Storage is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Nuclear Fuel Storage is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
