The report requires updating with new data and is sent in 48 hours after order is placed.

Natural boron is composed of two stable isotopes, 10B and 11B, with contents of 19.78% 10B and 80.22% 11B respectively. 10B has a very strong neutron absorption capacity, so it is used as a neutron moderator in nuclear reactors to control the operation of the reactor. On the contrary, 11B hardly absorbs neutrons, so it is used as a dopant in the manufacturing process of semiconductor devices, which can effectively improve the conductivity and radiation and interference resistance of semiconductor devices.

Nuclear grade 10B boric acid<sup>0</sup> is an important industrial raw material with good thermal neutron absorption properties.

The global Nuclear Grade 10B Boric Acid market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
