Abstracts

The global Nuclear Grades Resin market size is predicted to grow from US\$ 134 million in 2025 to US\$ 165 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

Nuclear grade resins are manufactured and processed specially to achieve exceptionally high purity, precise specifications and maximum conversion to their ionic form in a regenerated condition.

The demand for nuclear grade resins was closely tied to the nuclear power generation industry. In some regions, there was renewed interest in nuclear energy as a low-carbon and reliable source of electricity, which could drive the demand for resins used in nuclear applications. Nuclear grade resins are used in nuclear waste treatment processes, such as the purification and immobilization of radioactive waste. Ongoing efforts in nuclear waste management and disposal created a consistent demand for these resins.
