The global High Pressure Processing (HPP) market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

High-Pressure Processing (HPP) is a cutting-edge USDA–approved all natural process that utilizes intense water pressure to protect against harmful bacteria without affecting a food product's taste, texture, appearance or nutritional value. Products are packaged, sealed and then placed in a cylinder-shaped pressure chamber where it is surrounded by water. Up to 87,000 pounds of water pressure—roughly equal to five to six times the pressure found at the bottom of the deepest ocean—are exerted per square inch, protecting against harmful bacteria and sealing in freshness and flavor naturally, with no preservatives needed. HPP is one of the latest technologies that utilize non-heat methods to preserve food. It has been studied by scientists for more than a hundred years, but only within the past 20 years have companies started applying HPP commercially. In this report, we study the market size of food, which use high pressure processing. Some company, which offer High Pressure Processing (HPP) to the food manufacturing industry, is not covered in our report.

In the United States, key players of high pressure processing (HPP) include Hormel Food, Calavo Growers, Cargill, Wholly Guacamole, etc. Top five manufacturers hold a share over 35%. In terms of product, juices and beverages is the largest segment, with a share over 35%. And in terms of application, the largest application is supermarket, with a share over 60%.
