The global Nuclear Industry Automation market size is predicted to grow from US\$ 1702 million in 2025 to US\$ 2773 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Nuclear industry automation refers to the systematic application of automatic control technology, information technology, and intelligent equipment to the entire nuclear industry chain, including the nuclear fuel cycle, nuclear power plant operation, nuclear facility decommissioning, and radioactive waste management. This comprehensive technology system aims to achieve precise control of production processes, remote operation of the radiation environment, and intelligent early warning of nuclear safety risks. Its core lies in using distributed control systems, programmable logic controllers, industrial robots, and radiation-resistant intelligent sensors to replace manual labor in extreme environments such as high radiation, high temperature, and high pressure, performing measurement, operation, monitoring, and decision-making tasks. This system must strictly adhere to nuclear-grade reliability standards and the defense-in-depth principle to ensure reliable operation under any conditions. Its core value lies in significantly reducing personnel radiation exposure, improving the accuracy and traceability of nuclear material handling, and ensuring the long-term safe and stable operation of nuclear facilities. It is a key support for promoting the intelligent and unmanned development of the nuclear industry.
