The global Nuclear Industry On-Site Services market size is predicted to grow from US\$ 1242 million in 2025 to US\$ 1920 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Nuclear industry on-site services refer to the comprehensive range of specialized technical services provided by professional technicians at nuclear facilities, including installation, commissioning, overhaul, maintenance, inspection, and upgrades for nuclear reactors, nuclear fuel cycle facilities, radioactive waste treatment systems, and related equipment. The core of this service lies in adhering to strict radiation protection regulations and nuclear safety laws to ensure personnel safety and environmental compliance in radioactive environments. Service content covers reactor refueling and maintenance, instrumentation and control system calibration, mechanical equipment inspection and maintenance, in-service inspections, and decontamination. Service personnel must hold relevant nuclear industry qualifications and be equipped with specialized protective equipment and radiation monitoring instruments. Its core value lies in ensuring the long-term safe, stable, and reliable operation of nuclear facilities, extending facility lifespan, and ensuring that all operations comply with nuclear safety regulatory requirements.

Pricing for nuclear industry on-site services varies significantly depending on the complexity of the work and the radiation risk, ranging from hundreds of dollars per hour for routine instrument calibration to millions of dollars for specialized refueling and overhaul services. Labor costs typically account for the largest share of the cost structure, typically 50%-65%, including salaries for nuclear-grade qualified engineers, radiation protection training, and high-value insurance; specialized tools and protective equipment account for 15%-20%, such as robotic arms, underwater work equipment,

and air suits; and radiation protection and waste disposal account for 10%-15%, covering dose monitoring, decontamination, and radioactive waste disposal. Gross profit margins exhibit a clear stratification: routine maintenance and ancillary services face intense competition with gross profit margins of approximately 20%-30%; refueling and overhaul services and remote operations in high-radiation areas, due to technological barriers and safety access requirements, can achieve gross profit margins of 40%-55%; while nuclear facility decommissioning and emergency response services, due to extremely high uncertainty and qualification requirements, can have gross profit margins exceeding 60%. The overall profitability of the industry is shaped by the scarcity of technology and the costs of safety compliance.

In the downstream applications of Nuclear Industry On-Site Services, nuclear fuel cycle accounts for the highest proportion at approximately 35%, involving the operation and maintenance of uranium conversion, enrichment, and reprocessing facilities; nuclear facility decommissioning is the second largest at approximately 30%, with demand growing rapidly as the number of aging nuclear facilities increases; radioactive waste management accounts for approximately 20%, spanning the entire nuclear energy industry chain; nuclear accident emergency response accounts for approximately 10%, maintaining standby response capabilities; and other applications such as research reactor maintenance account for 5%. Decommissioning and waste management together account for more than half of the total, becoming the core engine for future growth.

United States market for Nuclear Industry On-Site Services is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Nuclear Industry On-Site Services is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
