The global Nuclear Island Anchor Bolts market size is predicted to grow from US\$ 280 million in 2025 to US\$ 378 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In 2025, global the nuclear island anchor bolts's production reached approximately 2.38 million units, with an average global market price of around US\$ \$50-\$200 per unit. In 2025, the global 's total production capacity of nuclear island anchor bolts reached 3.17 million units. The industry average gross profit margin of this product has reached 31%. Nuclear island anchor bolts are high-strength fixing devices specifically designed and manufactured for the nuclear island section of nuclear power plants, primarily used for securing and connecting the nuclear island structure and critical equipment. Due to the extremely harsh working environment of the nuclear island, these anchor bolts require superior seismic resistance, corrosion resistance, high-temperature resistance, and radiation resistance. These anchor bolts are typically made of special alloy materials and undergo rigorous quality control and certification to ensure high reliability and safety under extreme conditions. The design and use of nuclear island anchor bolts directly affect the overall structural safety and operational stability of the nuclear power plant, especially in long-term use under earthquake, radiation, and high-temperature environments.

With the increasing global demand for low-carbon energy and the growing status of nuclear energy as a clean energy source, the nuclear power industry will continue to develop, positively impacting the demand for nuclear island anchor bolts. Especially during the construction of new nuclear power plants and the upgrading of existing ones, nuclear island anchor bolts, as core fixing components, will inevitably face higher technical requirements and broader market demand. Furthermore, continuous

advancements in nuclear power technology and the promotion of high safety standards have also driven the continuous improvement of the technical level of nuclear island anchor bolts, resulting in higher seismic resistance, high-temperature resistance, and radiation resistance. It is expected that in the next few years, with the increase in nuclear power projects worldwide, especially in emerging markets such as China and India, the market demand for nuclear island anchors will grow steadily, becoming an indispensable and important part of the nuclear power industry chain.
