## Abstracts

According to this study, the global Nuclear Maintenance, Repair, and Overhaul market size will reach US\$ 2556 million by 2031.

Nuclear Maintenance, Repair, and Overhaul is a comprehensive technical support activity for nuclear facilities and their key equipment. Nuclear maintenance focuses on ensuring that the equipment is in a safe and reliable operating state through daily inspections, regular maintenance, condition monitoring and preventive maintenance. Nuclear repair targets equipment failures or performance degradation, and quickly repairs equipment functions through fault diagnosis, component replacement, performance recovery and other measures. Nuclear overhaul is a comprehensive and in-depth overhaul carried out during the operation cycle of nuclear facilities, involving complex operations such as equipment dismantling inspection, replacement of aging components, system performance testing and safety upgrades, aiming to provide reliable support for the next operation cycle. The three together constitute a technical service system covering the entire life cycle of equipment, and its core goal is to ensure that nuclear facilities operate within a safe, efficient and sustainable framework through professional and systematic technical means.
