This kit is used to separate nuclear and cytoplasmic components. The separated components can be used for protein purification, protein immunoblotting or other experiments requiring similar materials. Please use reagents and materials that are free of protease or nuclease contamination. During the experiment, please keep all experimental materials on ice. Common experimental problems are protein degradation caused by non-specific protease degradation of the separation product, which is ultimately reflected in the appearance of low molecular weight protein bands in protein immunoblotting.

The global Nuclear and Cytoplasmic Extraction kit market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
