According to this study, the global Nuclear Plant In-service Inspection Service market size will reach US\$ 24404 million by 2031.

Nuclear Plant In-service Inspection Service refers to a professional technical service that conducts systematic monitoring and diagnosis of equipment material degradation, structural integrity, and system functional reliability for key equipment such as reactor pressure vessels, steam generators, main pumps, pipelines, valves, and core systems such as cooling systems and control systems during the operation phase of the entire life cycle of a nuclear power plant, through non-destructive testing (such as ultrasound, eddy current, X-ray, visual, etc.) and performance evaluations triggered regularly or according to the operating status of the equipment. Its core goal is to identify and eliminate potential safety hazards in advance to ensure that nuclear power plants continue to meet safety regulations. At the same time, through data accumulation, it provides a scientific basis for equipment life management, maintenance strategy optimization, and technical transformation, ultimately ensuring the long-term safe, stable, and efficient operation of nuclear power plants.
