The global Nuclear Power Anchor Bolt market size is predicted to grow from US\$ 280 million in 2025 to US\$ 378 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In 2025, global the nuclear power anchor bolt's production reached approximately 2.38 million units, with an average global market price of around US\$ \$50-\$200 per unit. In 2025, the global 's total production capacity of nuclear power anchor bolt reached 3.17 million units. The industry average gross profit margin of this product has reached 31%. Nuclear power anchor bolts are fasteners specifically designed and manufactured for nuclear power plants. They are used to securely fix equipment, structures, and foundations to buildings and ground, ensuring the stable operation of the nuclear power plant's equipment and structures. Nuclear power anchor bolts have extremely high design requirements, and must be able to withstand harsh environmental factors such as high-intensity mechanical loads, vibration, thermal expansion, and nuclear radiation. They are typically made of corrosion-resistant and high-temperature-resistant materials such as high-strength steel, stainless steel, or alloy steel, and are embedded in the concrete foundation during construction to ensure the structural safety and reliability of the nuclear power plant during operation.

The nuclear power anchor bolt industry chain mainly consists of raw material suppliers, anchor bolt manufacturers, nuclear power project developers, construction companies, and testing and certification agencies. Raw material suppliers provide basic materials such as steel, stainless steel, and alloy steel. Anchor bolt manufacturers design and produce high-performance anchor bolts according to the requirements of the nuclear power plant. Construction companies are responsible for installing these anchor bolts into the nuclear power plant's infrastructure and equipment. Project developers are the

end customers who use these anchor bolts, ensuring the stability and safety of various equipment in the nuclear power plant. The upstream of the industry chain is the supply of high-quality raw materials, and the downstream consists of companies or government agencies that complete the installation and subsequent maintenance.

With the continuous development of the global nuclear power industry and the expanding number and scale of nuclear power plants, the demand for nuclear power anchor bolts will continue to grow. Especially against the backdrop of countries promoting clean energy and reducing carbon emissions, nuclear energy, as a stable and low-carbon energy source, has received increasing attention. In the future, with the development of nuclear power technology and the increasing requirements for safety and reliability, the performance of nuclear power anchor bolts will be further improved, and the requirements for materials, design, and manufacturing processes will continue to rise. It is expected that the recovery of the nuclear power industry and the increase in newly built nuclear power plants will drive the continued growth of the nuclear power anchor bolt market, making it an important part of the nuclear energy industry.
