The global Nuclear Power Lighting market size is predicted to grow from US\$ 459 million in 2025 to US\$ 703 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

In 2025, the global production of nuclear power lighting reached approximately 234,500 units, with an average global market price of around US\$2,000 per unit. In the same year, the global total production capacity of nuclear power lighting reached 293,100 units. The industry average gross profit margin of this product reached 26%. Nuclear power lighting refers to lighting systems designed specifically for locations exposed to radiation, high temperatures, high humidity, or corrosive environments, such as nuclear power plants, nuclear fuel processing facilities, nuclear research institutions, and nuclear medicine facilities. These lamps must be resistant to radiation, high temperatures, explosions, and corrosion. Their core value lies in providing safe, stable, and long-lasting lighting support for the construction, operation, and maintenance of nuclear power plants. In particular, during accidents, they ensure emergency lighting in critical areas and safe evacuation of personnel, providing a crucial foundation for the safe operation of nuclear power plants.

The upstream of the nuclear power lighting industry chain involves the supply of raw materials and core components, including LED chips, special heat dissipation materials, driver power supplies, and key materials ensuring radiation resistance and sealing. The midstream involves the research, design, and manufacturing of lighting fixtures, carried out by specialized manufacturers. The downstream is directly applied to various scenarios within nuclear power plants, with demand directly driven by the construction, operation, maintenance, and safety regulations of nuclear power plants.

From the perspective of global energy transition and the resurgence of nuclear power, the nuclear power lighting industry has a stable growth prospect. On the one hand, the continued development of new nuclear power projects in China, India, the Middle East, and Southeast Asia is creating new demand for nuclear-grade lighting equipment. On the other hand, in mature nuclear power markets such as Europe, the United States, and Japan, a large number of nuclear power units are entering the equipment upgrade and life extension phase, driving the upgrading and transformation of traditional lighting systems to nuclear-grade LED lighting systems. Furthermore, increasingly stringent nuclear safety regulations in various countries are setting higher standards for the reliability, radiation resistance, and emergency response capabilities of lighting systems, further driving the growth in demand for high-performance nuclear-grade lighting products. Simultaneously, the continuous maturation of LED energy-saving, intelligent, and digital operation and maintenance technologies is enabling nuclear power lighting to evolve from simple lighting equipment into an important component of smart nuclear facilities. Future industry growth will primarily benefit from increased global nuclear power investment, the upgrading and transformation of aging nuclear power plants, and the digitalization of nuclear facilities.
