The global Nuclear Power Plant Operator Training market size is predicted to grow from US\$ 524 million in 2025 to US\$ 798 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Nuclear power plant operator training refers to a professional training system for nuclear power plant operators. This system utilizes theoretical instruction, simulation, and hands-on training to equip them with knowledge of nuclear reactor operating principles, system operation procedures, safety regulations, and accident response capabilities. This training typically relies on full-range simulators and standardized curricula, covering everything from basic knowledge to handling complex operating conditions. It must also meet the certification requirements of regulatory agencies and is a crucial link in ensuring the safe and stable operation of nuclear power plants.

The demand for nuclear power plant operator training is expected to remain stable and continuously grow in the future, primarily driven by the global nuclear power resurgence, the increase in new units, and the life extension and retrofitting of older units. As nuclear power technology evolves towards digitalization and intelligence, new-generation control systems and human-machine interfaces are constantly being upgraded, placing higher demands on operator skills and expanding training content from traditional operations to digital simulation and intelligent decision support. Simultaneously, the promotion of small modular reactors (SMRs) and new types of reactors will also generate new training demands. In the future, training models will increasingly rely on virtual reality (VR), augmented reality (AR), and remote simulation platforms to achieve a more efficient, low-cost, and highly safe training system.
