Abstracts

The global Nuclear Reactor Simulator market size is predicted to grow from US$ 334 million in 2025 to US$ 510 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

The Nuclear Reactor Simulator is a specialized equipment and software system based on core principles from multiple disciplines, including nuclear physics, neutron dynamics, thermal hydraulics, structural mechanics, and control theory. It integrates digital modeling, high-precision numerical calculations, hardware-in-the-loop (HIL)/digital twin technology, and interactive visualization. Its core function is to accurately simulate the physical characteristics, system structure, control logic, and operating conditions of a nuclear reactor at a 1:1 scale. This allows for precise simulation of all scenarios, including normal operation (start-up, shutdown, power regulation, refueling), abnormal fluctuations, fault evolution, and emergency response. It quantifies key parameters such as core neutron flux, coolant temperature/pressure, fuel rod temperature, and radioactive dose, addressing core pain points in the nuclear power field such as personnel training, R&D design, operation and maintenance support, and safety verification. Ultimately, it provides scientific data support and technical assurance for safe nuclear power operation, technological innovation, and compliant regulation.

United States market for Nuclear Reactor Simulator is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Nuclear Reactor Simulator is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
