The global Nuclear Receptor Profiling Services market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Nuclear receptors are transcription factors that are regulated by small hydrophobic ligands such as hormones or vitamins. Upon ligand binding, nuclear receptors translocate into the nucleus to bind DNA and modulate the expression of their target genes to regulate a variety of cellular mechanisms such as growth, proliferation, metabolism, or homeostasis on a transcriptional level. Nuclear receptors are successfully targeted in the clinic to treat, for example, cancer, cardiovascular or autoimmune diseases.

Nuclear Receptor Profiling Services refer to specialized scientific services that involve the assessment and characterization of nuclear receptors (NRs). These receptors are a class of proteins found within cells that are responsible for sensing steroid and thyroid hormones and certain other molecules. They play a critical role in regulating gene expression and are implicated in various physiological processes and diseases.

These services are crucial for drug discovery and development, toxicology studies, and understanding the molecular mechanisms underlying various diseases, including cancer, metabolic disorders, and endocrine dysfunctions.
