Nuclear waste assay system is a sophisticated and crucial technology designed for the comprehensive analysis of nuclear waste. It consists of a series of advanced detection and measurement components. The system can accurately measure the radioactivity levels of various nuclides present in the nuclear waste, including alpha - emitting, beta - emitting, and gamma - emitting nuclides. It utilizes techniques such as gamma - ray spectroscopy, neutron activation analysis, and other specialized methods to identify and quantify the different isotopes within the waste. This enables precise determination of the waste's composition, hazard level, and decay characteristics.
