The global Nuclear Waste Disposal Robot market size is predicted to grow from US$ 143 million in 2025 to US$ 193 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In 2024, global Nuclear Waste Disposal Robot production reached approximately 7250 units , with an average global market price of around US$ 18.5k per unit. Nuclear Waste Disposal Robots are specialized robots designed for performing nuclear waste management tasks in extreme radioactive environments. Utilizing high-precision robotic arms, flexible mobile platforms, and radiation-resistant sensing systems, they replace humans in high-radiation areas to perform critical tasks such as waste handling, packaging, storage tank inspection, and equipment dismantling and decommissioning. Their core value lies in minimizing the radiation exposure risk to personnel through enhanced radiation protection design and remote control technology, while simultaneously improving operational efficiency and accuracy. They are indispensable technical equipment for ensuring the safe decommissioning of nuclear facilities and the safe disposal of radioactive waste.The industry's production capacity is 8,000 units, with a gross profit margin of 22.5%-28.6%.The global nuclear waste disposal robot industry chain is characterized by technology-driven growth and strategic collaboration. Upstream core components are dominated by industrialized powers such as the US, Germany, and Japan: Teledyne FLIR and AMS provide radiation-resistant sensors and vision systems; KUKA and FANUC supply high-precision joints and drive modules; and Siemens and ABB provide control systems and power solutions. Downstream, EDF and Rosatom are deeply involved in reactor decommissioning, while Tokyo Electric Power Company (TEPCO) continues to invest in robot technology verification for the Fukushima reprocessing. In the Chinese market, driven by policy, CGN and CNNC are actively collaborating with domestic research institutions and enterprises to accelerate
