Abstracts

According to this study, the global Nuclear Waste Recycling market size will reach US\$ 4147 million by 2031.

Nuclear waste is recyclable. Once reactor fuel (uranium or thorium) is used in a reactor, it can be treated and put into another reactor as fuel.

More than half of France's electricity comes from nuclear power and recycles used fuel. Other countries that use used fuels include the United Kingdom, Russia and Japan. The United States currently does not allow the recycling of nuclear waste because of the risk of nuclear proliferation. Countries that recycle or reprocess nuclear waste include Belgium, China and Switzerland.
