The global NVMe Storage Enclosure market size is predicted to grow from US\$ 475 million in 2025 to US\$ 878 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

NVMe Storage Enclosure is a specialized hardware device designed to house multiple NVMe (Non-Volatile Memory Express) solid-state drives (SSDs), providing high-speed storage expansion for servers, data centers, or enterprise storage systems. It connects to host systems via PCIe or other high-bandwidth interfaces, supporting hot-swappable drives, efficient cooling, and centralized management. NVMe storage enclosures are primarily used to scale storage capacity while maintaining ultra-low latency and high IOPS (Input/Output Operations Per Second) performance. In 2025, global NVMe SSD enclosure production reached approximately 6.47 M units, with an average global market price of around US\$75 per unit. Annual production capacity is 7.5 M units. Gross Profit Margin: 22%. The NVMe SSD expansion cabinet industry has a clear vertical structure. Upstream mainly consists of high-performance NAND flash memory and PCIe controller suppliers, including Micron, Samsung, and Kioxia, which provide the essential components for NVMe SSDs. Midstream includes manufacturers of enclosures and chassis, such as ICY DOCK, Yottamaster, and Inspur, who integrate NVMe drives into multi-bay, enterprise-grade expansion systems. Downstream covers data centers, cloud service providers, and high-performance computing enterprises, which purchase these enclosures to scale storage capacity with low latency and high throughput. The industry benefits from the rising adoption of all-flash storage architectures and enterprise demand for high-speed storage expansion. NVMe SSD expansion cabinets represent a strategically important but often overlooked segment in the data storage ecosystem. While consumer NVMe enclosures are widely marketed, the enterprise multi-bay solutions require specialized engineering, high reliability, and

integration with server infrastructures. Manufacturers that can combine robust thermal design, high-density scalability, and PCIe lane optimization will capture long-term market share. In my opinion, China-based manufacturers like Yottamaster and Inspur are gaining competitiveness by offering cost-effective and scalable solutions without compromising performance, which could reshape the global enterprise NVMe enclosure landscape.

United States market for NVMe Storage Enclosure is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
