The global Nylon Conveyor Belt market size is predicted to grow from US$ 2285 million in 2025 to US$ 3132 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

Nylon conveyor belt is a kind of conveyor belt widely used in industrial material transportation. It is mainly made of nylon fiber as its reinforcement material and covered with a layer of rubber on the surface. Due to the excellent mechanical properties of nylon fiber, such as high strength, wear resistance, elasticity and tensile resistance, nylon conveyor belt can work stably for a long time under high load and harsh environment. The structure of nylon conveyor belt usually includes one or more layers of nylon fabric, which are interwoven to provide strong load-bearing capacity and ensure that no breakage or deformation occurs during material transportation. The rubber coating provides the conveyor belt with additional wear resistance, corrosion resistance and certain chemical resistance, so that it can adapt to different working environments.

Nylon conveyor belts are widely used in many industries such as mining, metallurgy, construction, logistics, etc. due to their excellent wear resistance, strength and flexibility. With the acceleration of global industrialization and the improvement of automation level, the nylon conveyor belt market has shown a stable growth trend. The increase in market demand has promoted technological innovation and product upgrades, especially in terms of environmental protection and energy saving. In addition, the lightweight and high-performance characteristics of nylon conveyor belts have made it an important position in the highly competitive conveyor belt market, and it is expected to continue to maintain a good growth momentum in the next few years.
