## Abstracts

The global Nylon Screen Printing Mesh market size is predicted to grow from US\$ 243 million in 2025 to US\$ 288 million in 2032; it is expected to grow at a CAGR of 2.4% from 2026 to 2032.

In 2025, global Nylon Screen Printing Mesh production reached approximately 34,440 K Sqm with an average global market price of around US\$ 7.2 per Sqm, and a gross profit margin of approximately 10%-30%. Nylon Screen Printing Mesh is a woven monofilament or multifilament mesh fabric used as the stencil carrier in screen printing. It offers high elasticity, good ink release, and strong abrasion resistance, making it suitable for printing on textiles, packaging, decals, and general graphics. Common specifications are defined by mesh count, thread diameter, and open area, which together determine ink deposit and print resolution. Nylon meshes are valued for impact resistance and resilience on curved or uneven substrates, but they can be more sensitive to tension stability and solvent swelling than polyester. Key requirements include uniform weave, stable aperture, consistent heat-setting, low contamination, and compatibility with emulsions and cleaning chemicals.

The industrial chain of Nylon Screen Printing Mesh includes upstream inputs such as nylon polymer chips, spinning additives, and processing chemicals. Midstream production covers filament extrusion, drawing and heat-setting, precision weaving, scouring and surface treatment, inspection, and roll slitting/packaging. Downstream users include screen printers and converters producing apparel prints, labels, stickers, promotional graphics, and industrial markings. Supporting services include mesh pretensioning, frame stretching, quality certification, and logistics to ensure stable print performance and repeatable ink deposition.

United States market for Nylon Screen Printing Mesh is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Nylon Screen Printing Mesh is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
