The global Nylon Tubes for Electric Vehicles market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

With the rapid popularity of electric vehicles, the number of electric drive systems (including batteries, motors and electronic control) and intelligent equipment equipped in them has gradually increased, resulting in an increase in the overall quality of the vehicle compared with traditional fuel vehicles, which poses certain challenges to range, power performance and cost control. Therefore, the demand for lightweight technology for electric vehicles is more urgent. Especially in the technology system of electric vehicles, the performance of heat dissipation and cooling system is especially critical. Compared with other traditional materials, nylon piping can not only meet the demand for lightweighting in new energy vehicles, but also effectively optimise the performance of the cooling system, making it an ideal choice for achieving the goal of electric lightweighting, due to its superior performance in terms of light weight, low cost, and low-temperature resistance.
