The global Object Detection Models market size is predicted to grow from US\$ 12835 million in 2025 to US\$ 30590 million in 2032; it is expected to grow at a CAGR of 13.3% from 2026 to 2032.

Object Detection Models are a class of computer vision algorithms designed to simultaneously identify and localize multiple objects within images or video by predicting bounding boxes, class labels, and confidence scores for each detected instance. Representative models such as YOLO, Faster R-CNN, and DETR are typically built on deep learning architectures (e.g., convolutional neural networks or Transformers) and trained on large-scale datasets to achieve robust performance across complex, real-world scenarios, with widespread applications in autonomous driving, surveillance, industrial inspection, and medical imaging. The pricing of Object Detection Models varies widely depending on deployment: open-source models like YOLO are typically free (with costs limited to compute infrastructure), while cloud-based APIs generally charge about \$1-\$10 per 1,000 images or \$0.05-\$0.20 per video minute; enterprise-grade custom solutions can range from \$10,000 to over \$1 million per project, and edge or embedded deployments often involve per-device licensing fees of roughly \$1-\$50, scaling higher for industrial-grade systems.

United States market for Object Detection Models is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
