## Abstracts

According to this study, the global Oblique Photography Modeling Software market size will reach US\$ 230 million by 2031.

Oblique photography modeling software is a 3D modeling software developed based on oblique photography technology. It uses continuous aerial photographs collected by drones as the basis and uses the graphics processing unit (GPU) to quickly, accurately and automatically generate realistic real-life 3D scene models. By analyzing the real-life 3D model, the 3D coordinates, view conditions, slope and aspect, and existing buildings of the real site can be obtained. It is widely used in mountain surveying and planning, urban construction planning, and ancient building protection. It also includes model repair software for the post-repair and optimization of oblique photography models.
