The global Observation Mini ROV market size is predicted to grow from US\$ 97 million in 2025 to US\$ 160 million in 2031; it is expected to grow at a CAGR of 8.8% from 2025 to 2031.

Modern ROV systems can be categorized by size, depth capability, onboard horsepower, and whether they are all-electric or electro-hydraulic.

Micro - typically Micro class ROVs are very small in size and weight. Today's Micro Class ROVs can weigh less than 3 kg. These ROVs are used as an alternative to a diver, specifically in places where a diver might not be able to physically enter such as a sewer, pipeline or small cavity.

Mini - typically Mini Class ROVs weigh in around 15 kg. Mini Class ROVs are also used as a diver alternative. One person may be able to transport the complete ROV system out with them on a small boat, deploy it and complete the job without outside help. Occasionally both Micro and Mini classes are referred to as "eyeball" class to differentiate them from ROVs that may be able to perform intervention tasks.

This report covers both micro and mini Observation ROV.

The major players in global Observation Mini ROV market include VideoRay, Teledyne, AC-CESS, etc. The top 3 players occupy about 30% shares of the global market. North America and Europe are main markets, they occupy about 60% of the global market. Micro Observation ROV is the main type, with a share about 60%. Aquaculture is the

main application, which holds a share about 35%.
