According to our LPI (LP Information) latest study, the global Occupancy Sensor market size was valued at US\$ 2010.3 million in 2023. With growing demand in downstream market, the Occupancy Sensor is forecast to a readjusted size of US\$ 4255.3 million by 2030 with a CAGR of 11.3% during review period.

The research report highlights the growth potential of the global Occupancy Sensor market. Occupancy Sensor are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Occupancy Sensor. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Occupancy Sensor market.

Occupancy sensors are devices that detect when a space is unoccupied and accordingly automatically turn OFF (or dim) the lights, thereby saving energy. The device may also turn the lights ON automatically upon detecting the presence of people, providing convenience and a potential security aid. According to the Lawrence Berkeley National Laboratory, occupancy-based strategies can produce average lighting energy savings of 24%.

Due to their relative simplicity and high energy-savings potential, coupled with energy code mandates, these sensors are a staple in new construction. They are also a common control feature in retrofit projects.

Global occupancy sensor market key players include Signify, Schneider Electric, Honeywell and GE Current, they hold about 40% of global shares. Asia Pacific and

Europe are the key market, have a share about 60%. PIR (passive infrared) Sensors is the key type, with a share over 50%. Non-residential application is the mainstream, which occupies about 70% of the global market.
